

MOHAMMED HOSSAM

Cloud DevOps Engineer | System Administrator

Suez, Egypt | +201203903315 | eng.mohammed.hossam22@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

System Engineer experienced with cloud computing, network and system administration with hands-on AWS architecture and DevOps CI/CD pipelining tools including Jenkins, GitHub action, ArgoCD and containerization tools as Docker and Kubernetes, Skilled with task automation with python and bash scripting. Proficient with a wide scale system administration with management of users and systems along with practicing log analysis and monitoring along with an efficient troubleshooting in error cases capable of applying the right security configurations upon the system software and the network infrastructure. Passionate about learning from senior engineers and optimizing workflows and expanding in DevSecOps career.

EDUCATION

Bachelor of Computer Engineering

Suez Canal University, Egypt

Sep 2020 – Jul 2024

GPA: 3.01 / 4.0

- Coursework: Secure Software Development, Database Systems, Operating Systems, Embedded systems security
- Executed professional projects focused on full stack Web application development and cloud engineering

SKILLS

Technical core skills

- **Containerization:** Docker, Kubernetes, Docker Swarm, Docker Compose
- **CI/CD:** Jenkins, GitHub Actions, Argo CD
- **Cloud platform:** AWS, IaC (terraform)
- **administration:** Linux system administration (nginx, tomcat), log analysis and monitoring (Prometheus, Grafana), backups, user management, hardware and software setup, security control (firewall, security rules), troubleshooting
- **Network:** network infrastructure maintaining, network security,
- **Web development:** Git NodeJS, Express JS, Next JS, API development, MySQL, MongoDB, agile methodology
- **Security:** Web pentesting (OWASP Top 10), threat hunting and infrastructure bug testing
- **Embedded:** Embedded software development and hardware integration, RTOS and Embedded security
- **Scripting:** Bash, Python (Automation), YAML
- **Programming:** C, C++, Java, Python

PROJECTS

- **CI/CD Pipeline:** Built an end-to-end GitOps CI/CD pipeline (GitHub Actions → Docker → Argo CD → Kubernetes) for a containerized microservice application leveraging the power of automation for both integration and deployment stages.
- **Web Portfolio:** Automated a serverless deployment pipeline for a high-performance Next.js portfolio, utilizing Terraform for cloud infrastructure provisioning and GitHub Actions for continuous delivery. [github](#)
- **ADAS:** "Advanced Driving Assistance System" working on 5-sub systems to achieve collision avoidance using inputs (distances, images, timing) from external hardware to be processed by an embedded software running on RaspberryPI kit where it applies a V2V connection whenever an event is detected to enable the decision-making for both sides
- **Simple bookstore:** a backend application for a bookstore where i used the Express JS framework integrated with MongoDB as a database running on NodeJS engine (freelance) [github](#)
- **Github actions pipeline:** a workflow for testing a web app using GitHub actions that runs a test script (freelance) [github](#)
- **Web scraper:** a project collects all the scripts developed to scrape data from custom websites (freelance) [github](#)

CERTS

- Red Hat System Administration – II (RH134)

LANGUAGES

Arabic (Native) English (Proficient)
